

For the love of tech, will someone think of the children?

Tech storage with more KAPOW!!!

A superpowered case study from LapCabby

Every story needs a hero, and this one is no different. We spoke to super-teacher and technology specialist Brian Smith about how LapCabby storage carts saved the day at his school.

Picture the scene. All around the world, our schoolchildren are failing – failing to pay attention in class. It's not their fault. They'd rather be playing computer games.

Introducing **Innovation Man** (aka mild-mannered Brian Smith, the **Technology Specialist** at the Harry Stone Montessori Academy) and his quest to rid his school of crushing boredom through awesome handheld devices. Like educators across the country, Brian knew technology had uses beyond entertainment – it could be educational too. He introduced tablets and Chromebooks into his lessons, giving each student the opportunity to learn and create in a whole new way.

BOOM! Instantly, lessons were livelier, school became fun, and learning became awesome. But our hero still had more work to do. "We had a major storage issue. **Tablets needed to be stored safely and locked up securely. They needed to be charged, synced and ready for every lesson.** And we had to find a way to keep everything

organized without adding to teachers' workloads. I mean, we wanted something that did everything and look good, too. Was that too much to ask?"

LAPCABBY TO THE RESCUE! "These carts were like nothing I'd seen before," Brian said. "They have so many **clever features**, and they let you store different makes and models of hardware together – even those in cases. LapCabby **charges** the devices up, and can **sync** them too. The carts have a **separate compartment for the power supply**. And they come in a **choice of colors**. LapCabby provided the solutions we needed. The kids love them, and I love them!"

All LapCabby carts feature:

- Ventilation to keep devices cool as they charge
- Secure locking and a separate power compartment
- A Power7 timer to help save and manage energy use
- Heavy-duty wheels and rounded corner bumpers

Born in the UK, the LapCabby range of laptop, netbook and tablet carts is a big hit in schools worldwide – and is now available in the USA.

See how LapCabby can help you be a hero at your school.
