

Nottingham University Hospitals save £270,000 per year by using iPads to make food orders and choose UniCabby to ensure devices are charged and secure at all times.

Healthcare

UniCabby

Cost Effective

One of the biggest hospitals in the UK have successfully reduced food waste from 12% to below 5% by using iPads to take orders on wards. All patients now get a choice when it comes to meal times and food stock can be held for an extra week without increasing wastage. This has saved them over £270,000 per year meaning directives are met and these funds can be used in more efficient areas of need.

It's crucial to the long term success of this project that devices are charged and up to date every day. That's why they chose the UniCabby from LapCabby as their device management solution; keeping devices safe, secure and charged whenever they're needed.
